Death rates by state fitted by month 1982–2013 against t2m mean : male 5

The figure is a scatter plot titled "Illinois". The x-axis is labeled "t2m mean" and ranges from approximately -5 to 25, with major ticks at 0, 10, and 20. The y-axis is unlabeled but has a grid extending from -10 to 10. The plot displays two data series: blue dots and red dots. The blue dots are primarily located in the region where "t2m mean" is between -5 and 10, with y-values ranging from -5 to 10. The red dots are primarily located in the region where "t2m mean" is between 10 and 25, with y-values ranging from -5 to 10. Both series show a general upward trend as "t2m mean" increases. Fitted curves are shown for each series: several blue curves for the blue data and several red curves for the red data. The blue curves are mostly in the lower-left quadrant, while the red curves are mostly in the upper-right quadrant. The plot includes a light gray grid.
