Death rates by state fitted by month 1981–2009 against t2m days_increasing_by_5 : Women 5

This line plot, titled 'Fukui', displays the 't2m days_increasing_by_5' metric over a 3-day period for numerous individual samples. The x-axis is labeled 't2m days_increasing_by_5' and ranges from 0 to 3. The y-axis represents the frequency of each value, with a maximum count of 15. The plot features a dense cluster of data points at day 0, with values ranging from approximately 0.5 to 14.5. As the day increases, the data points become more sparse. Several lines are plotted, representing the progression of individual samples. Most lines are colored in shades of blue and red. A few lines show a significant increase in the metric over time, while others remain relatively stable or show a slight decrease. The overall trend suggests a distribution of values that shifts and spreads as the time period progresses.
