The figure is a line plot titled "Minnesota". The x-axis is labeled "t2m days_increasing_by_5" and ranges from 0 to 8. The y-axis is unlabeled. The plot displays individual data points as dots and lines connecting them over five time points (0, 1, 2, 3, 4). The data is divided into two groups: red and blue. The red group shows a general upward trend, while the blue group shows a general downward trend.

Death rates by state fitted by month 1982–2013 against t2m days_increasing_by_5 : female 15

The plot, titled "Oregon", displays the number of days where the temperature is 5 degrees or more above the long-term average for various locations. The x-axis, labeled "t2m days_increasing_by_5", has major ticks at 0, 1, 2, and 3. The y-axis is unlabeled. Data points are represented by small circles in blue, red, and purple. Lines connect the data points for each location across the x-axis values. The plot shows a wide distribution of values at x=0, with many points clustered near the center. As x increases to 1 and 2, the number of locations with high values (above the center) decreases, while the number of locations with low values (below the center) increases. The lines generally show a downward trend as x increases, indicating that fewer locations experience 5 or more days of temperature increases as the threshold increases.
