Death rates by state fitted by month 1981–2009 against t2m days_below_10 : Women 5

The figure is a scatter plot titled "Mie". The x-axis is labeled "t2m days_below_10" and ranges from 0 to 30. The y-axis is unlabeled but ranges from 0 to 100. There are three data series represented by different colors: red, blue, and purple. Each series consists of data points and a corresponding regression line. The red series starts with a high value at x=0, peaks around x=1, and then generally decreases. The blue series starts at a low value at x=0 and increases steadily. The purple series starts at a low value at x=0 and increases steadily, with a steeper slope than the blue series. The plot includes a light gray grid.
