Death rates by state fitted by month 1982–2013 against t2m days_changing_by_5 : female 15

The figure is a scatter plot titled "New Jersey". The x-axis is labeled "t2m days_changing_by_5" and has major tick marks at 0, 5, and 10. The y-axis is unlabeled. The plot contains a large number of data points, which are color-coded into three groups: red, blue, and purple. Many points are clustered at x=0 and x=1. Lines connect points of the same color across the x-axis, showing the change in the y-value. The red lines generally show a slight increase or stay flat. The blue lines show a more pronounced upward trend. The purple lines are fewer and show a mix of trends. The overall distribution of points suggests a positive correlation between the x-axis variable and the y-axis variable.
