Death rates by state fitted by month 1981–2009 against t2m days_increasing_by_5 : Women 15

The plot, titled "Saitama", displays the number of days where the 2m temperature increases by 5 units or more over a period of three days. The x-axis is labeled "t2m days_increasing_by_5" and has major ticks at 0, 1, 2, and 3. The y-axis is unlabeled but has a grid. Data points are represented by small circles in blue, red, and grey. Lines connect the data points for each location across the three-day period. Most locations show a high frequency of days with temperature increases at day 0, which generally decreases or stabilizes by day 1 and day 2. A few locations show an increase in the number of days at day 2 and day 3.
