Death rates by state fitted by month 1981–2009 against t2m sd : Men 45

The figure is a scatter plot titled "Fukui". The x-axis is labeled "t2m sd" and ranges from approximately 0.5 to 4.5, with major ticks at 1, 2, 3, and 4. The y-axis is unlabeled. The plot contains three distinct groups of data points, each represented by a different color: red, blue, and grey. Each group has its own corresponding regression line, also colored red, blue, or dark blue. The red lines generally show a positive correlation, while the blue and dark blue lines show more varied slopes, some positive and some negative. The data points are widely scattered across the plot area, with a notable outlier in the blue group at a high y-value around x=2.5.
