

85 state-month intercept

This figure is a horizontal bar chart illustrating the distribution of a variable across the 50 US states. The y-axis is labeled "State" and lists the states in five rows. The x-axis represents the magnitude of the variable for each state, indicated by the length of the bars. A color scale at the top provides a visual key for the values, ranging from light red (representing the lowest values) through various shades of gray and green to dark blue (representing the highest values).
